

Clevertronics ESG Statement

Clevertronics is committed to being the most reliable and trusted emergency lighting company, guided by sustainable practices and processes.

We're dedicated to maintaining our position as the world's most reliable and trusted emergency lighting company. An ongoing commitment to improving and leading sustainability is crucial. We aim to be a business our people are proud to work for and our customers are confident to partner with, to help them achieve further sustainable outcomes.

We've built our sustainability foundation on several key initiatives:

- Removing toxic battery technology from our ranges and extending the product lifetime of exit and emergency luminaires from four to over twelve years has dramatically reduced toxic waste and the unnecessary replacement of over two million luminaires in the past 10 years
- Ensuring that 95% of luminaire materials and packaging can be recycled or reclaimed
- Switching to 100% renewable energy at our head office supported by a 200kW solar system installation and the purchase of renewable energy supply

Now, guided by a comprehensive three-year Environmental, Social and Governance [ESG] strategy, we're prioritising our efforts to accelerate our positive impact.

With targets including an 80% reduction in direct emissions by 2027, improved circularity and recyclability of our products and packaging, and a Code of Conduct for all key suppliers by Q3 2025, we're ready to achieve more.

We continually improve the sustainability performance of our products, addressing our environmental and social impact, and maintaining transparent communications with our stakeholders. Our strategy combines sustainability targets to drive innovation and set a new standard in emergency lighting solutions, ensuring a better future for all.
